

MUHAMMAD HAMZA RAFI

Web Developer

03125431964 | hamzarafi773@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Web developer with two software internships and a portfolio of deployed React, Django, and Node.js applications. Final-year project pairs a RoBERTa emotion classifier with a locally hosted Llama 3.2 LLM behind a Django REST Framework API, built so every AI component degrades gracefully rather than failing.

WORK EXPERIENCE

Intern, Web Development — NASTP (National Cybercrime and Forensic Lab) July 2025 – Sept 2025

- Developed a browser forensics tool (React.js, FastAPI) automating extraction and visualization of history, cookies, and login credentials.
- Built a real-time monitoring system for live browsing activity with sub 0.1ms logging latency via instant UI notifications.
- Designed a modular backend to parse SQLite databases from multiple browser engines and deliver structured data via RESTful APIs.
- Built an interactive timeline tool enabling forensic analysts to reconstruct user sessions and spot suspicious activity.

Intern, Web Development — Speridian Technologies July 2024 – Sept 2024

- Built a full-stack performance management app (Angular/TypeScript, ASP.NET Core Web API) for employee registration and performance reviews.
- Engineered pipelines tracking execution metrics across 50+ active projects, cutting reporting latency by 80%.
- Managed database design and operations using SQL Server with Entity Framework Core.

SELECTED PROJECT

AI Cognitive for Mental Health Coaches — Final Year Project Sept 2025 – June 2026

- Built a full-stack mental health platform (React 19 + TypeScript, Django REST Framework) across 10 modular apps covering auth, profiles, emotion logging, AI guidance, appointments, and notifications.
- Developed a multi-layer emotion classifier (RoBERTa, 28-category GoEmotions) with custom sarcasm, negation, and crisis-language detection, plus a rule-based fallback for ML failures.
- Integrated a locally hosted Llama 3.2 LLM (Ollama) via a custom prompt layer using detected emotion, risk level, and conversation history for context-aware, empathetic responses.
- Designed a rule-based risk assessment engine that scores interactions and triggers human coach intervention alerts when clients cross risk thresholds.
- Built the coach-client workflow (license approval, assignment, appointment booking, real-time notifications) on a 28-table Django ORM / SQLite schema, with fallbacks on every AI component.

Tech: React • Django • Ollama Llama 3.2:3B • RoBERTa • Hugging Face Transformers • SQLite3

ADDITIONAL PROJECTS

Real Estate Platform — Full-stack app (React 19 + Vite, Node.js/Express 5, PostgreSQL/Drizzle) in a pnpm monorepo with a type-safe, auto-generated OpenAPI contract; deployed as independent production services on Vercel. [Website](#)

The Trinket Bloom — Mobile-first e-commerce platform (React SPA + Express.js REST API, SQLite) with product catalogue, wishlist, cart, and checkout; deployed on Vercel. [Website](#)

California Boutique — Mobile-first e-commerce storefront (React + Vite, Tailwind CSS, Node.js/Express) with dynamic product data and cart functionality. [Website](#)

CORE TECHNICAL SKILLS

Application Development: ReactJS, Angular, TypeScript, .NET, RESTful APIs, Python (Django)

AI & Data Science: Ollama (Llama 3.2:3B), RoBERTa, Hugging Face Transformers

Methodology & Tools: Agile, ITIL, Git & GitHub, Postman, SQL Server, PostgreSQL, SQLites

EDUCATION

Bachelor of Science in Computer Science — Foundation University Rawalpindi Campus Sept 2022 – June 2026

Rawalpindi, Pakistan • Final-year project: AI Cognitive for Mental Health Coaches
